

Translation into english

prompt1

Imagine that you are a medical researcher. Assess the following statement: «{statement}», and assign it to one of the following truth categories according to the rules below:

«True» – if at the current stage of knowledge there is sufficient research and a broad medical consensus that the statement is entirely true

«False» – if at the current stage of knowledge there is sufficient research and a broad medical consensus that the statement is entirely false

«Disputed» – assigned in all other cases.

Here are representative examples of such cases:

- Part of the statement is true
- Exaggeration
- Insufficient data
- Contradictory data
- Unverifiable statement
- Unclear statement

After completing the assessment, present the result in the following format:

1. Name of the category.
2. On a new line – your argumentation in favor of the chosen category, with full references to authoritative sources.
3. Then provide full bibliographic references for the sources you use in your argumentation.

prompt2

Imagine that you are a medical researcher. Assess the following statement: «{statement}», and assign it to one of the following truth categories according to the rules below:

«True» – if at the current stage of knowledge there is sufficient research and a broad medical consensus that the statement is entirely true

«False» – if at the current stage of knowledge there is sufficient research and a broad medical consensus that the statement is entirely false

«Disputed» – assigned in all other cases.

Here are representative examples of such cases:

- Part of the statement is true
- Exaggeration
- Insufficient data
- Contradictory data
- Unverifiable statement
- Unclear statement

After completing the assessment, present the result in the following format:

1. Your argumentation in favor of the chosen category, with full references to authoritative sources.
2. On a new line – Name of the category.
3. Then provide full bibliographic references for the sources you use in your argumentation.

promp3

Imagine that you are a medical researcher. Assess the following statement: «{statement}», and assign it to one of the following truth categories according to the rules below:

«True» – if at the current stage of knowledge there is sufficient research and a broad medical consensus that the statement is entirely true

«False» – if at the current stage of knowledge there is sufficient research and a broad medical consensus that the statement is entirely false

«Disputed» – assigned in all other cases.

Here are representative examples of such cases:

- Part of the statement is true (“potatoes and eggs must be washed before boiling” - if there is consensus that potatoes must be washed, but eggs do not)
- Exaggeration (“sleep is the best remedy for fatigue” - if there is consensus that sleep is a good remedy, but not always the best)
- Insufficient data (“nanorobots have learned to treat cancer” - if at the current stage there are only initial experiments applying nanorobots for some types of cancer)
- Contradictory data (“running is beneficial for strengthening knee joints” - if, according to some studies, running is beneficial, and according to others, it is harmful)
- Unverifiable statement (“to avoid vitamin deficiency, it is enough to add a little fruit to the diet” - if it is impossible to understand what “a little” means, and the truthfulness of the statement depends on this understanding)
- Unclear statement (“it is possible to feed oneself with nettle” - if there is consensus that nettle is not dangerous, but using it as a means of satiety is almost impossible)

After completing the assessment, present the result in the following format:

1. Name of the category.
2. On a new line – your argumentation in favor of the chosen category, with full references to authoritative sources.
3. Then provide full bibliographic references for the sources you use in your argumentation.

promp4

Imagine that you are a medical researcher. Assess the following statement: «{statement}», and assign it to one of the following truth categories according to the rules below:

«True» – if at the current stage of knowledge there is sufficient research and a broad medical consensus that the statement is entirely true

«False» – if at the current stage of knowledge there is sufficient research and a broad medical consensus that the statement is entirely false

«Disputed» – assigned in all other cases.

Here are representative examples of such cases:

- Part of the statement is true (“potatoes and eggs must be washed before boiling” - if there is consensus that potatoes must be washed, but eggs do not)
- Exaggeration (“sleep is the best remedy for fatigue” - if there is consensus that sleep is a good remedy, but not always the best)
- Insufficient data (“nanorobots have learned to treat cancer” - if at the current stage there are only initial experiments applying nanorobots for some types of cancer)
- Contradictory data (“running is beneficial for strengthening knee joints” - if, according to some studies, running is beneficial, and according to others, it is harmful)
- Unverifiable statement (“to avoid vitamin deficiency, it is enough to add a little fruit to the diet” - if it is impossible to understand what “a little” means, and the truthfulness of the statement depends on this understanding)
- Unclear statement (“it is possible to feed oneself with nettle” - if there is consensus that nettle is not dangerous, but using it as a means of satiety is almost impossible)

After completing the assessment, present the result in the following format:

1. Your argumentation in favor of the chosen category, with full references to authoritative sources.
2. On a new line – Name of the category.
3. Then provide full bibliographic references for the sources you use in your argumentation.
